

DHCP Server

Dynamic Host Configuration Protocol (DHCP) is a client/server protocol that automatically provides an Internet Protocol (IP) host with its IP address and other related configuration information such as the subnet mask and default gateway.

Benefits of DHCP

1. Reliable IP address configuration.
2. Reduced network administration.

Configuration steps in eNSP:

1. Prepare the environment.
2. Additional Configuration
3. DHCP configuration on routers & switches
4. Create an interface-based IP address pool
